Overview

This 2025 Annual Dodd-Frank Act Stress Test Results Disclosure presents the results of the annual stress test conducted by JPMorgan Chase & Co. ("JPMorganChase" or the "Firm") as required under the rules of the Board of Governors of the Federal Reserve System (the "Federal Reserve") that implement the Dodd-Frank Act Stress Test ("DFAST" or the "Annual Stress Test") requirements ("DFAST Rule"). The results reflect certain forecasted financial measures for the nine-quarter projection period (1Q25 through 1Q27) under the Supervisory Severely Adverse Scenario prescribed by the Federal Reserve. The stress test has been conducted in accordance with the regulations and other requirements of the Federal Reserve.

The results represent hypothetical estimates under the Supervisory Severely Adverse Scenario prescribed by the Federal Reserve on February 5, 2025 and do not represent JPMorganChase's forecasts of actual expected gains, losses, pre-provision net revenue ("PPNR"), net income before taxes, capital, risk-weighted assets ("RWA"), or capital ratios.

The results were calculated using forecasting models and methodologies developed by JPMorganChase. The Federal Reserve conducts its own stress tests of large banks, including JPMorganChase, based on forecasting models and methodologies developed by the Federal Reserve. Because the models and methodologies utilized by the Firm and the Federal Reserve are different, the results separately published by the Federal Reserve¹ may vary from those disclosed in this report. JPMorganChase may not be able to explain the differences between the results published in this report and the results published by the Federal Reserve. This report does not include information on the Firm's 2025 Stress Capital Buffer ("SCB") requirement, which will be published by the Federal Reserve by August 31, 2025.

JPMorganChase's results reflect the standardized set of capital action assumptions that are specified in the Federal Reserve's DFAST Rule² for each quarter of the projection period, as follows:

- No dividends on any instruments that qualify as common equity tier 1 capital ("CET1");
- Payments on instruments that qualify as additional tier 1 capital or tier 2 capital equal to the stated dividend, interest, or principal due on such instrument;
- No redemption or repurchase of any capital instrument that is eligible for inclusion in the numerator of a regulatory capital ratio; and
- No issuances of common stock or preferred stock

A strong capital position is essential to the Firm's business strategy and competitive position. Maintaining a strong balance sheet to manage through economic volatility is a strategic imperative of the Firm's Board of Directors, Chief Executive Officer and Operating Committee. Capital adequacy and stress testing is subject to oversight at the most senior levels of the Firm, including the Firm's Board of Directors. The Annual Stress Test is subject to a governance framework, which includes oversight by the Board of Directors, the Firmwide Asset and Liability Committee, the Capital Governance Committee, the Firmwide and line of business ("LOB") Chief Financial Officers and Chief Risk Officers, Model Risk Governance and Review, and Internal Audit.

2025 Supervisory Severely Adverse Scenario overview

KEY ECONOMIC VARIABLES IN THE SUPERVISORY SEVERELY ADVERSE SCENARIO

- The Supervisory Severely Adverse Scenario, prescribed by the Federal Reserve, is characterized by a hypothetical severe global recession accompanied by a period of heightened stress in commercial and residential real estate markets and in corporate debt markets
- For the full scenario description and a complete set of economic variables provided by the Federal Reserve, see Board of Governors of the Federal Reserve System <u>2025 Stress Test Scenarios</u> (February 5, 2025)
- The Supervisory Severely Adverse Scenario assumes the following stress to key economic variables over a nine-quarter planning horizon:

Key economic variables	
U.S. real GDP - 4Q24 to trough	(7.8%)
U.S. unemployment rate - peak	10.0%
3-month Treasury yield - trough	0.1%
10-year Treasury yield - trough	1.0%
BBB spreads - 4Q24 to peak	3.9%
Stock market index - 4Q24 to trough	(50%)
House price index - 4Q24 to trough	(33%)
CRE price index - 4Q24 to trough	(30%)

ADDITIONAL COMPONENTS¹

- The Firm is also tested against the following additional, add-on components to the 2025 Supervisory Severely Adverse Scenario:
 - Global market shock² set of hypothetical shocks to a large set of risk factors which stress trading and certain other fair-valued positions
 - Counterparty default the unexpected default of the Firm's largest counterparty determined by net stressed losses across derivatives and securities financing transactions

¹ As prescribed by the Federal Reserve, the "as-of" date for the 2025 Annual Stress Test global market shock and counterparty default components can be any date during the business week of October 7-11, 2024

² Shocks to private equity exposures were not included in the 2025 global market shock component; Private equity exposures were stressed under the Supervisory Severely Adverse Scenario

Key risks addressed in the Annual Stress Test

The below risks, categorized across four key risk types, represent risks inherent in JPMorganChase's business activities. The results of the Firm's capital stress test reflect risks from each of these categories:

Risk types	Definition		
	• Strategic risk is the risk to earnings, capital, liquidity or reputation ¹ associated with poorly-designed or failed business plans or an inadequate response to changes in the operating environment		
Strategic	• Capital risk is the risk that the Firm has an insufficient level or composition of capital to support the Firm's business activities and associated risks during normal economic environments and under stressed conditions		
	• Liquidity risk is the risk that the Firm will be unable to meet its cash and collateral needs as they arise or that it does not have the appropriate amount, composition and tenor of funding and liquidity to support its assets and liabilities		
	• Credit and investment risk is the risk associated with the default or change in credit profile of a client, counterparty or customer; or loss of principal or a reduction in expected returns on investments, including consumer credit risk, wholesale credit risk and investment portfolio risk		
Credit and	 Consumer credit risk is the risk associated with the default or change in credit profile of a customer 		
investment	 Wholesale credit risk is the risk associated with the default or change in credit profile of a client or counterparty 		
	 Investment portfolio risk is the risk associated with the loss of principal or a reduction in expected returns on investments arising from the investment securities portfolio or from principal investments 		
Market	• Market risk is the risk associated with the effect of changes in market factors, such as interest and foreign exchange rates, equity and commodity prices, credit spreads or implied volatilities, on the value of assets and liabilities held for both the short and long term		
	• Operational risk is the risk of an adverse outcome resulting from inadequate or failed internal processes or systems; human factors; or external events impacting the Firm's processes or systems. It includes cybersecurity, compliance, conduct, legal, and estimations and model risk		
	• Cybersecurity risk is the risk of harm or loss resulting from misuse or abuse of technology or the unauthorized disclosure of data		
	• Compliance risk is the risk of failing to comply with laws, rules, regulations or codes of conduct and standards of self-regulatory organizations		
Operational	• Conduct risk is the risk that any action or misconduct by an employee could lead to unfair client or customer outcomes, impact the integrity of the markets in which the Firm operates, harm employees or the Firm, or compromise the Firm's reputation		
	 Legal risk is the risk of loss primarily caused by the actual or alleged failure to meet legal obligations that arise from the rule of law in jurisdictions in which the Firm operates, agreements with clients and customers, and products and services offered by the Firm 		
	• Estimations and model risk is the potential for adverse consequences from decisions based on incorrect or misused estimation outputs		

Note: For additional information on the Firm's risks, see Firmwide Risk Management and the various risk sections on pages 91-160 of JPMorganChase's Annual Report on Form 10-K for the year ended December 31, 2024

¹ Reputational impact is less quantifiable than other risks. Actual losses from historical events that may have impacted the Firm's reputation are captured through the Firm's operational loss forecasting framework; however, the entirety of the reputational impact may not be quantifiable

Key methodologies used in the Annual Stress Test

Components	Forecast methodology		
	• Represents total net revenue less noninterest expense; includes operational risk expense and excludes the provision for credit losses		
	• Product-centric models and forecasting frameworks for revenue are based on JPMorganChase's historical experience supplemented by industry data and qualitative model estimation, where appropriate		
PPNR	• Granular, LOB-level projections are used for expense forecasts, as well as Firmwide expense reduction guidelines for severe stress environments		
	 Operational risk loss projections utilize multiple approaches. For risks with relatively more frequent losses, the relationship between macroeconomic variables and the Firm's historical loss experience for those risks are utilized to derive loss projections. For idiosyncratic risks with relatively large potential losses, the loss projections rely on forward-looking assessment of the risk (i.e., scenario analysis, reasonably possible losses) by subject matter experts 		
	Provision on loans, lending-related commitments, and HTM investment securities		
	 Projections of net charge-offs, allowances for credit losses, and asset balances are based on the composition and characteristics across asset classes and customer segments of the wholesale and consumer loan portfolios and the held-to-maturity investment securities portfolio 		
Provision for	 Model-based approach reflects credit migrations and changes in delinquency trends driven by underlying economic factors; additionally, models consider macroeconomic forecasts, characteristics such as credit score, ratings, geographic distribution, product and industry mix, and collateral type 		
credit losses	 Utilizes loss experience data relevant to the Firm's asset classes and portfolios 		
	Provision on AFS investment securities		
	• Projections of losses on AFS positions resulting from credit impairment assumes no investment securities are sold throughout the forecast period		
	• Credit impairment is estimated using credit migration models for non-securitized assets and cash flow simulations for securitized assets		
	 Instantaneous global market shocks with no mitigating actions are applied to trading and counterparty positions as of a chosen date in the previous quarter; mark-to-market and nine-quarter default losses are reflected in the first quarter of the projection period 		
Trading & counterparty losses	• Utilizes the existing Firmwide stress framework and models approved for valuation and stress testing to measure the Firm's exposure to changes in th fair value of financial instruments primarily driven by changes in market factors such as credit spreads, equity prices, interest rates, currency rates and commodity prices		
	• Counterparty default assumes the instantaneous and unexpected default of the counterparty which would result in the largest loss across derivatives and securities financing transaction activities after the market shock		

Key methodologies used in the Annual Stress Test (cont'd)

Components	Forecast methodology		
Other gains/losses	 Projections reflect changes in valuations of HFS loans and commitments pending syndication, as well as loans accounted for under the FVO in the Firm's wholesale loan portfolio and any loan hedges Projections capture the Firm's exposure to changes in the mark-to-market value of HFS/FVO loans primarily due to credit spreads, as well as default losses 		
RWA	 Projections of RWA are calculated under the Basel III Standardized capital risk-based approach Credit risk RWA projections utilize forecasted assets, derivatives, and other off-balance sheet items Market risk RWA projections reflect relationships between RWA and overall performance of financial markets affected by key macroeconomic drivers using estimation models 		
OCI	 OCI primarily includes the net change in unrealized gains and losses on investment securities and the Firm's defined benefit pension and OPEB plans Projections are based on estimated changes in value of positions using a combination of full revaluation and sensitivity-based forecasting approaches for AFS investment securities, pension and OPEB plan assets and liabilities 		
Capital	• Capital projections reflect the standardized set of capital action assumptions that are specified in the Federal Reserve's DFAST Rule

Notes

Slides 3 and 8

- 1. Risk-based capital ratios were calculated under the Basel III Standardized rules. For additional information, refer to Capital Risk Management on pages 97-107 and Note 27 of JPMorganChase's Annual Report on Form 10-K for the year ended December 31, 2024 ("2024 Form 10-K")
- 2. As of January 1, 2025, the benefit from the Current Expected Credit Losses ("CECL") capital transition provision had been fully phased-out. As of December 31, 2024, CET1 capital reflected the remaining \$720 million CECL benefit. For additional information, refer to Note 27 of the Firm's 2024 Form 10-K
- 3. The projected minimum capital ratio represents the lowest calculated stressed risk-based and leverage-based capital ratios during the period 1Q25 to 1Q27

Slides 4 and 9

- 1. Average assets is the nine-quarter average of total assets
- 2. Noninterest income includes the benefit to the Firm and the Bank from the shared-loss agreements with the Federal Deposit Insurance Corporation related to the First Republic covered loan portfolio and (losses)/gains on private equity exposures
- 3. Noninterest expense includes losses from operational risk events and other real estate owned costs
- 4. Other revenue includes one-time income and expense items not included in PPNR
- 5. Provision for credit losses includes the change in the allowance for loan losses and lending-related commitments
- 6. Credit losses on investment securities include available-for-sale ("AFS") securities and held-to-maturity ("HTM") securities
- 7. Trading and counterparty losses include mark-to-market and credit valuation adjustment losses resulting from the assumed instantaneous global market shock, and losses arising from the counterparty default scenario component applied to derivatives and securities financing transaction activities
- 8. Other losses/(gains) include projected changes in fair value of loans held-for-sale ("HFS"), loans accounted for under the fair value option ("FVO"), equity securities not held for trading, and hedges on loans
- 9. Other comprehensive income is reported on a post-tax basis and includes net unrealized (losses)/gains on: (a) AFS investment securities and (b) net losses and prior service costs related to defined benefit pension and other postretirement employee benefit ("OPEB") plans

Slide 5

- 1. Portfolio loss rates are calculated by taking the cumulative losses over the nine-quarter projection period (i.e., 1Q25 to 1Q27) divided by the nine-quarter average loan balances excluding loans HFS and loans accounted for under the FVO
- 2. Commercial & industrial includes small and medium enterprise loans and corporate cards
- 3. Other consumer includes auto loans and other consumer loans
- 4. Other includes international real estate loans, loans secured by farmland, loans to foreign governments, agricultural loans, securities lending, loans to depository and other financial institutions, and all other loans and leases

Notes (cont'd)

Slides 6 and 7

- 1. 4Q24 and 1Q27 reflect end-of-period amounts. Other amounts represent the cumulative nine-quarter impact for 1Q25 to 1Q27
- 2. Provision for credit losses includes credit losses on investment securities (AFS/HTM)
- 3. Other losses include projected changes in fair value of loans HFS, loans accounted for under the FVO, equity securities not held for trading, and hedges on loans
- 4. Other includes preferred stock dividends, income tax (expense)/benefit, goodwill and intangibles net of related deferred tax liabilities, and other capital deductions

Forward-looking statements

The results presented here contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, including projections that represent estimates based on the hypothetical, severely adverse economic and market scenarios and assumptions under the Supervisory Severely Adverse Scenario prescribed by the Federal Reserve. The stress test results do not represent JPMorganChase's forecasts of actual expected gains, losses, pre-provision net revenue, net income before taxes, capital, risk-weighted assets, or capital and leverage ratios. Actual results may differ from those set forth in the forward-looking statements. Factors that could cause JPMorgan Chase & Co.'s actual results to differ materially from those described in the forward-looking statements can be found in JPMorgan Chase & Co.'s Annual Report on Form 10-K for the year ended December 31, 2024, and Quarterly Report on Form 10-Q for the quarterly period ended March 31, 2025, which have been filed with the Securities and Exchange Commission's website (<u>https://jpmorganchaseco.gcs-web.com/ir/sec-other-filings/overview</u>), and on the Securities and Exchange Commission's website (<u>www.sec.gov</u>). JPMorgan Chase & Co. does not undertake to update any forward-looking statements.
